

Prostate

PROSTATIC DUCTS

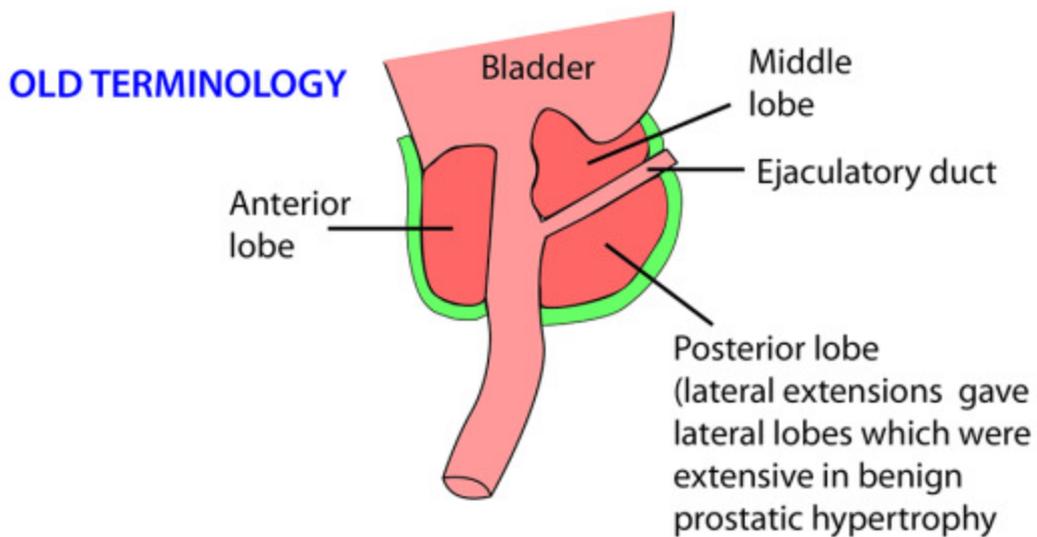

- Prostatic ducts open into urethra as two groups: inner and outer
- True fibrous capsule, but a false "capsule" develops when hypertrophic prostatic tissue compresses the posterior lobe (peripheral zone)

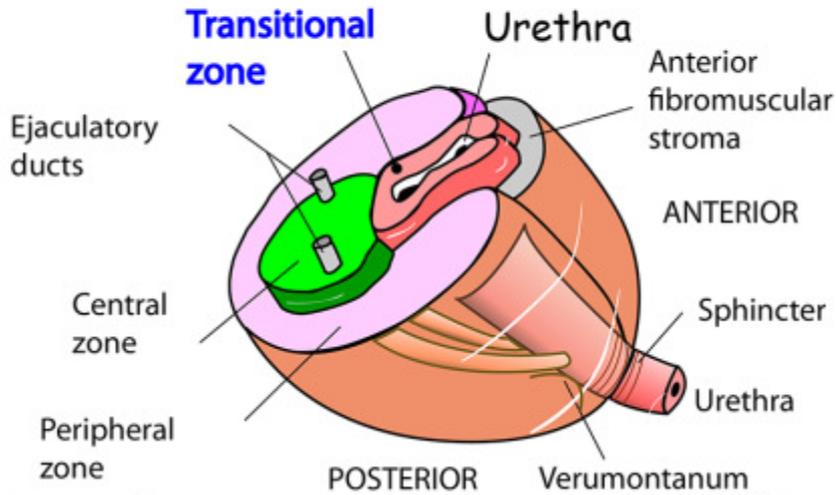

PROSTATIC LIGAMENTS & SUPPORTS

PROSTATE - LOBES

AXIAL PROSTATE TO SHOW "MODERN" LOBES

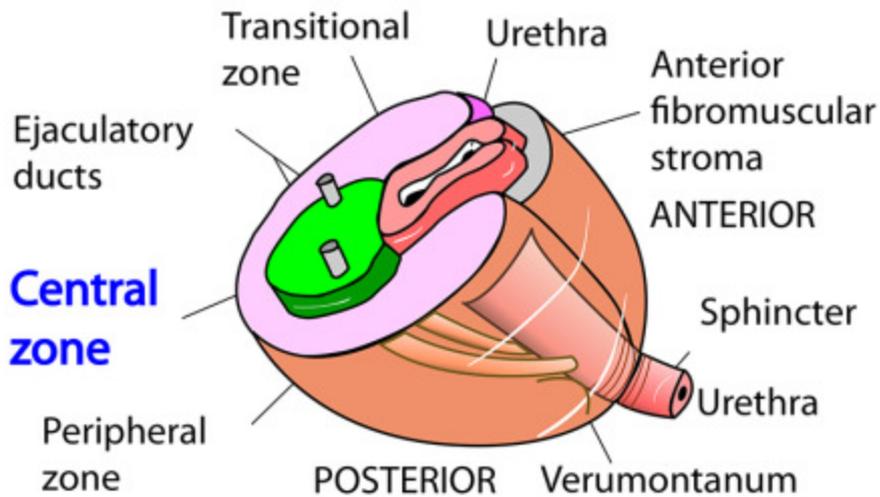

Transitional zone:

Surrounds the urethra. Liable to nodular benign enlargement (stroma & glandular) from 40 yrs onwards. Causes: ageing and circulating androgens

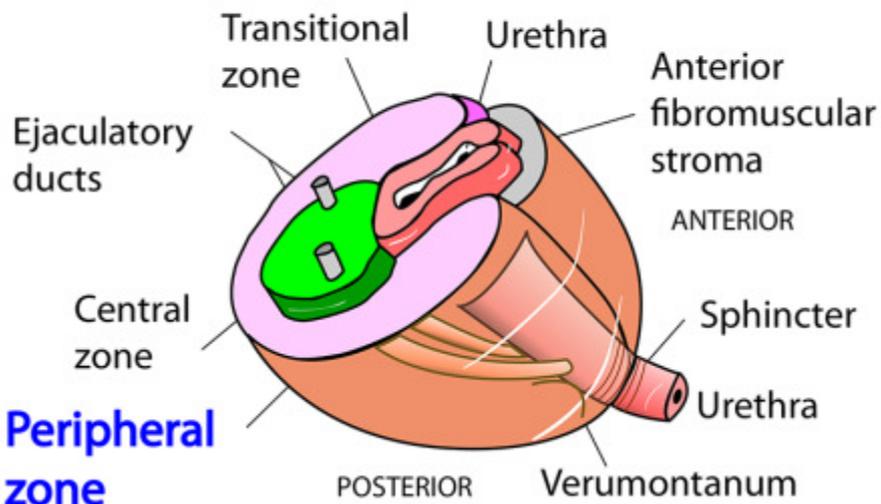

AXIAL PROSTATE TO SHOW "MODERN" LOBES

Central zone: surrounds the ejaculatory ducts all the way to the verumontanum.

AXIAL PROSTATE TO SHOW "MODERN" LOBES

Peripheral zone

Peripheral zone: surrounds the other two zones. 70% of cancers start here. It is pushed peripherally by benign enlargement and compressed
